

## **FOR IMMEDIATE RELEASE**

### **Select Spectrum Partners with Access Spectrum to Facilitate Upper 700 MHz A Block Wireless Solutions for U.S. Industries**

McLean, Virginia – [Jan. 7, 2025] – Select Spectrum, the leading provider of sales, marketing and consulting services for licensed wireless spectrum, is pleased to announce a new partnership with Access Spectrum, LLC to enhance the marketing of their remaining Upper 700 MHz A Block Licenses. Access Spectrum holds 21 Upper 700 MHz A Block licenses in areas spanning 30 states, predominately in the central, southern and mountain areas of the U.S, covering nearly 73 million people.

Over the past decade, Access Spectrum, BPC Spectrum and Dominion 700 have sold licenses to 26 utility and critical infrastructure “UCII” companies covering more than 1/3<sup>rd</sup> of the U.S. Select Spectrum continues to represent BPC and Dominion 700. With the addition of the Access Spectrum licenses, Select Spectrum now is able to offer all the remaining Upper 700 MHz A Block licenses covering nearly 2/3<sup>rd</sup>s of the country. Select Spectrum will integrate and feature Access Spectrum’s licenses into its extensive Spectrum Search database and promote them to a broader audience of potential buyers and lessees.

Access Spectrum has long been a key provider of licenses to UCIIIs and has used a variety of channel partners to reach the market, which will not change. However, this partnership represents a significant step forward to reach a wider and expanding range of potential buyers. Select Spectrum has been active in the incorporation of the Upper 700 MHz A Block as Band 103 for NB-IoT<sup>1</sup> in the 4G and 5G standards. With chips, modules and base stations from a variety of high-volume suppliers, Band 103 is now also able to support a wide range of smart city and smart energy applications at very low cost per end point. This new arrangement will enable Select Spectrum to provide more targeted and comprehensive marketing support to showcase these valuable licenses.

“Access Spectrum LLC has been a leading seller of Upper 700 MHz A Block including transactions with utilities, rail operators and energy companies” said Robert Finch, President of Select Spectrum. “Our team is committed to facilitating additional innovative solutions for an expanding range of customers.”

Andrew Rein, CEO of Access Spectrum, added that “Select Spectrum has been an innovator – applying an expanding range of marketing and business development strategies to support the rapid growth of private wireless networks in the U.S. We look forward to working cooperatively with their team, as we continue to work with other partners, to provide spectrum to support the ever-increasing demand for wireless solutions for U.S. industry.”
